

## **Exercise Progression Instructions**

## The following protocol is used to *gradually* return you to activity.

While doing physical activity, we want you to rate your perception of exertion. This feeling should reflect how heavy and strenuous the exercise feels to you, combining all sensations and feelings of physical stress, effort, and fatigue. Do not concern yourself with any one factor such as leg pain or shortness of breath, but try to focus on your total feeling of exertion.

Look at the rating scale below while you are engaging in an activity; it ranges from 0 to 10, where 0 means "no exertion at all" and 10 means "maximal exertion." Choose the number from below that best describes your level of exertion. This will give you a good idea of the intensity level of your activity, and you can use this information to speed up or slow down your movements to reach your desired range.

Try to appraise your feeling of exertion as honestly as possible, without thinking about what the actual physical load is. Your own feeling of effort and exertion is important, not how it compares to others. Look at the scales and the expressions and then give a number.

0	1	2	3	4	5	6	7	8	9	10
	Easy		Mild		Moderate			Hard		Intense

- Pay careful attention to your symptoms, your thinking, and your concentration skills at each stage of activity.
- A 24 hour rest period should be taken before progressing to the next stage.
- Move to the next stage of activity only if you do not experience any symptoms when completing the current exercise stage.
- If your symptoms return, immediately discontinue activity and rest for 24 hours. If your symptoms resolve, you may restart the previous stage of the return to play protocol. If your symptoms do not resolve, return with physical activity or significantly worsen, consult your physician and/or athletic trainer.

Name of Athlete:

Ctago	A ctivity	Objective	Completed					
Stage	Activity	Objective	Date:					
1	Walking or riding a stationary bike with	Perceived Exertion: Easy Minimal head movement						
	eyes fixed on a distant target x20-30	Minimal head movement	Initials:
